Step 6 Completion Report — Say It First

✅ All Step 6 Objectives Delivered

1. Presentation UI Components

Component	File	Specification & Clinical Alignment
`AvatarSvgRig`		Parametric 2D vector avatar rig (ADR-004, §3.4). Binds mouth quadratic Bezier curvature ($V \times 24.0$V × 24.0), brow slant ($-16V + 8A$–16V + 8A), blink rate ($3200/(1 + 0.8A)$3200/(1 + 0.8A)), breathing rhythm ($3.6 - 1.4A$), and somatic tilt ($D \times 6.5^\circ$ D × 6.5∘). Renders nonverbal cue pill and spoken captions.
`AffectRadarCanvas`		2D Cartesian phase plot mapping Valence ($X \in [-1, 1]$X ∈ [–1, 1]) ×× Arousal ($Y \in [-1, 1]$Y ∈ [–1, 1]) with quadrant labels and historical trajectory trails (§6.2 Panel 2).
`SubtextHud`		Unspoken Thought Bubble, Two-Way Bridge (`user_intent` vs. `received_as`), and Tactile Scaffolding Dial (0%0%, 50%50%, 100%100%). Enforces **zero subtext leakage in DOM** when Level 0 is selected (FR-05).
`InputDock`		Dual-modality dock with push-to-talk mic streaming and first-class silent text toggle (FR-02) plus non-destructive undo/rewind action (FR-06).
`CoRegulationModal`		Safety soft-brake activated when $T \geq 9.0$T ≥ 9.0 (Tier 3 Curtain Drop). Guides a 30-second 4-count visual box-breathing co-regulation cycle (FR-07).
`PostSessionDebrief`		Displays session debrief analysis and copyable 2-sentence DBT DEAR MAN Pocket Script blueprint ready for real-world deployment (FR-08).

2. Comprehensive Test Verification (Vitest)

All **128 tests across 22 test suites** passed with 0 failures:

```

 Test Files  22 passed (22)
      Tests  128 passed (128)
   Duration  783ms
```

3. Hexagonal Architectural Boundary Audit

AST scan of `src/presentation/components/` confirms:

- Only imports from `src/domain/` (entities, value-objects, services) and typed application use case outputs.
- Zero dependencies on infrastructure adapters (`GeminiStructuredAdapter`, `InMemorySessionRepo`).
